What Do We Offer

Highest Security Level

Facial recognition, of up to 99.99% accuracy, is the best method in ensuring security.

Configurable Access Rights

Employees' access rights to multiple workplaces can be easily configurable.

Auto Synchronisation

Once an employee is registered, his/her template will be automagically synchronised to all authorised workplaces.

Accessible Anytime, Anywhere

Our cloud-based access control solution, **BAS-Access**, is a proven, highly configurable system, which is capable of managing personnel access to multiple workplaces under a single control dashboard.

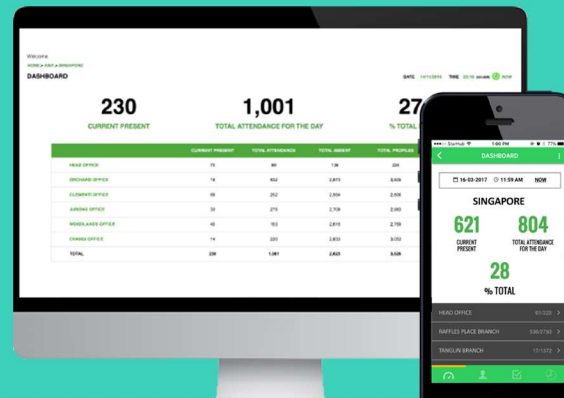

Peace of Mind Security

Do away with access cards or contact-based biometrics, as our facial recognition technology is totally contactless, resulting in greater convenience, less administration and better hygiene for your workplace.

True Big Data Solution

Leveraging on big data technologies, you will be able to have an overview of real-time statistics, and the added capability to drill down to individual information and movements.
